PROFILE

I am an Artificial Intelligence & Data Science student with a strong interest in transforming data into meaningful insights. I enjoy learning how AI, Machine Learning, and Data Analytics can solve real-world problems and improve decision-making across industries.I actively work on mini projects, academic assignments, and practical experiments to strengthen my understanding.

PROJECTS

ONLINE VOTING SYSTEM | HTML ,CSS , JAVASCRIPT , SQL

The Online Voting System is a secure web-based platform that replaces traditional paper-based voting. It allows voters to authenticate, vote once, and view real-time results. By using encryption and authentication, it ensures transparency, efficiency, and fraud prevention in the electoral process.

FRAUD DETECTION | AI AND ML

Designed and implemented a machine learning system to identify fraudulent financial transactions. Used classification techniques such as Logistic Regression and Random Forest to analyze transaction patterns and detect suspicious activities. Performed data cleaning, feature engineering, and applied methods to handle imbalanced datasets to improve model reliability. Assessed the model's effectiveness using evaluation metrics like precision, recall, and F1-score to ensure accurate and consistent fraud detection.

CO – CURRICULAR CERTIFICATES

- I have attended a Workshop in SNS Institutions Coimbatore in the title of "Robotics Process Automation" RPA.
- I have attended Connections event in SNS Institutions Coimbatore.
